General updates

Action required for pharmacies part of FRPP

Pharmacies that participate in the Federal Retail program (FRPP) received US government purchased COVID-19 vaccine and ancillary supplies for administration to individuals. As the Federal program begins to wind down, pharmacies must be able to account for all vaccines received. Please also preserve all records related to COVID-19 vaccine management for a minimum of 3 years, or longer if required by state, local or territorial law.

To aid you in this data reconciliation process, we have started communicating with pharmacies who have unaccounted for doses for each NCPDP that is part of the program. All questions should be directed to COVIDvaccines@amerisourcebergen.com.

It is important that pharmacies account for these doses accurately in the outlined processes, as they may be asked to provide additional documentation on data discrepancies for vaccine administrations or waste data that has been reported to the CDC.

We appreciate and thank you for all you are doing for your patients.

Vaccine program updates

CDC no longer recommends monovalent vaccine

As of April 19, 2023, CDC no longer recommends the use of monovalent mRNA COVID-19 vaccine. In anticipation of this recommendation, monovalent orders were placed on hold beginning on April 13, 2023 to avoid the delivery of unauthorized vaccine. All pending orders for monovalent mRNA vaccines in VTrckS will be canceled by CDC. No action is required on your part. You will receive notification of canceled orders in the coming days. Bivalent vaccine orders are not impacted by this action.

CDC now recommends the use of bivalent vaccine for all recommended mRNA COVID-19 vaccine dose(s). To minimize the risk of administration errors, providers should:

- Remove all monovalent mRNA vaccine from storage units immediately, even if they are not expired. This includes both EUA and BLA products (Comirnaty and Spikevax).
- Once all inventory is fully accounted for, remove monovalent mRNA COVID-19 vaccine from the vaccine inventory in your Immunization Information System. (Jurisdictions only.)
- Dispose of **all monovalent mRNA COVID-19 vaccine vials** in accordance with local, state, and federal regulations.
- Report all disposed inventory as wastage.

For additional information, including a table listing the mRNA monovalent COVID-19 vaccines that should be removed from your inventory, see [IIS COVID-19 Vaccine Related Code | CDC](#).

Caremark COVID-19 vaccine administration update

CVS Caremark® is working to update the claims adjudication system to allow claims for the bivalent for all vaccine doses. Until coding is complete, claims for the bivalent may reject for initial dose. Caremark anticipates this update being completed within the next 5 days. Pharmacies may resubmit claims after the system is updated, using the actual date of vaccine administration. Please see the [notice from Caremark](#) for additional information.

FDA EUA changes

On, April 18, 2023, the FDA amended its emergency use authorizations (EUAs) ([FDA announcement](#)) to authorize bivalent Moderna and Pfizer-BioNTech COVID-19 vaccines to be used for all doses administered to individuals 6 months of age and older. The monovalent Moderna and Pfizer-BioNTech COVID-19 vaccines are no longer authorized for use in the United States.

FDA retiring monovalent vaccines

The FDA is retiring the monovalent COVID-19 vaccines. The products below have been removed from ABC Order and any orders will be canceled. Read the [FDA press release](#).

- Pfizer Pediatric (6 Mos - 4) 59267-0078-04
- Pfizer Pediatric (5-11) 59267-1055-04
- Moderna Pediatric (6 Mos – 5) 80777-0279-99

Novavax available for order

Pharmacy participants can now place orders for the 5-dose vial presentation of Novavax COVID-19 vaccine (Unit of Sale NDC: 80631-0102-10). Each carton contains ten 5-dose vials. The minimum order quantity of the new Novavax vaccine is 100 doses or 2 cartons. This number of doses matches the number of doses supported by existing ancillary kits. You may still opt-out of receiving ancillary kits. The expiration date of this new Novavax presentation is October 31, 2023.

You can no longer place orders for the 10-dose vial presentation of the Novavax COVID-19 vaccine (Unit of Sale NDC: 80631-0100-10) has now ended. Please note that all viable doses of Novavax currently in the field have an expiration date of April 30, 2023. There will be no shelf-life extensions for this product. Providers should remember to:

- Remove expired vaccine vials immediately from storage units to avoid inadvertently administering them. Expired vaccine should NEVER be administered.
- Discard the vaccine according to the manufacture's guidance, state, and federal regulations.
- Update their inventory of Novavax in VaccineFinder. The current NDC of this vaccine should no longer be listed as in stock in after April 30, 2023 (i.e., available doses should be zero).

Remember, thresholds of Novavax monovalent vaccines have been lifted. You may order as many doses as you need. CDC anticipates Novavax COVID-19 vaccine will continue to serve as an alternative to mRNA COVID-19 vaccines into the foreseeable future. Novavax can be ordered by emailing a request to

COVIDvaccines@AmerisourceBergen.com.

Make sure your pharmacy is prepared for an audit

As a participant in the Federal Retail program providers received USG-purchased COVID-19 vaccine and ancillary supplies for administration to individuals. As the Federal program begins to wind down, pharmacies must be able to account for all vaccines received. Be sure your pharmacy is doing the following:

1. Reporting on hand doses in VaccineFinder
2. Processing all vaccine administrations through your pharmacy system
3. [Reporting waste in ABC Order](#)
4. [Reporting any transfers](#)

Your pharmacy may be asked to provide additional documentation on vaccine administrations if there are data discrepancies on vaccine administrations or other data that has been reported to the CDC.

Preparedness (PREP) Act

On April 14, 2023, Secretary Becerra announced that in the coming weeks, he will issue an amendment to the declaration under the PREP Act for medical countermeasures against COVID-19.

- Extending coverage for COVID-19 vaccines, seasonal influenza vaccines and COVID-19 tests
- Extending coverage through December 2024 for federal agreements
- No immediate impact on USG-distributed COVID-19 countermeasures

Resources

Expiry checking

Efforts should be made to verify expiration dates for all extended vaccines and therapeutics before administration/dispensing to patients. Pharmacies can check the expiration date using the manufacturer expiration date tool. It is best practice for pharmacies to develop their own process for removing expired vaccines/therapeutics within a reasonable time. Please ensure all team members review this process and are updating inventory.
